

# Good for Enterprise: iOS

Secure business mobility on today's hottest iOS devices:  
Apple iPhone, iPad, and iPod Touch

Today, your employees want access to critical corporate data while on the go. You want to help provide mobility to your employees, while protecting sensitive company information. Good for Enterprise™ delivers data protection, as well as the ability to easily manage employees' Apple® iPhone, iPod Touch, and iPad devices, remotely. Good's solution is the secure, easy-to-manage, and cost-effective choice.

## + SECURITY FIRST

Good uses patented end-to-end security that protects corporate data along each phase of delivery to all provisioned iOS devices. Data transmitted over the air—and at rest on devices—is secured with FIPS certified AES encryption

No need to change your firewall settings or set up new inbound connections—all Good servers are deployed behind the firewall with a secure outbound connection using standard port 443. Corporate data stays strongly protected without disruptive changes to your current infrastructure.

## + CORPORATE DATA, SECURELY CONTAINED

Good for Enterprise is a securely contained environment. Data is encrypted from the corporate server, and secure access stays within the Good for Enterprise application.

Good for Enterprise makes the office conveniently mobile: employees access corporate email, save and manage files, and manage contacts and their calendars through the Good for Enterprise app, just as they would access Microsoft Outlook or Lotus Notes at the office desktop. Accessing corporate Intranets or Web applications is done through a secure browser within the Good application.

## ALWAYS AHEAD OF THE MARKET

To increase users' productivity on-the-go, Good provides a complete and secure email attachment and file handling solution. Good's File Repository functionality combines security with flexibility, allowing employees to save and send attachments using a secure partition and file system.

Outside of the application, business and personal data don't mix, preventing potential enterprise data loss or leakage—the latter often caused by consumer apps contaminating business apps.

## + VISIBILITY AND CONTROL

Good for Enterprise is a versatile application for mobile employees, and allows you complete control over your entire workforce. Troubleshoot issues with complete visibility into all devices. Protect corporate data through easy-to-apply policies, such as requiring passwords and preventing cut/copy/paste from the Good app. Perform remote wipe of enterprise data only, leaving personal data intact. Empower your employees with basic tasks, including adding or remote-wiping their own devices through an easy-to-use Web-based utility.

## + WEB-BASED MANAGEMENT

Access a universal dashboard through any Web browser, and instantly view and manage all mobile devices in your workforce. Provision new iOS devices, enforce passwords, distribute custom or enterprise applications, establish role-based policies—from virtually anywhere, anytime. In short, spend less time managing software and more time protecting business data.

# Good for Enterprise: iOS

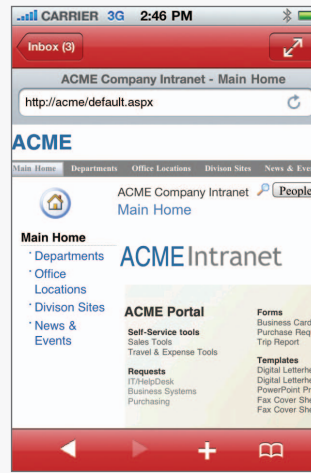

## SECURE FEATURES THAT ARE EASY TO USE

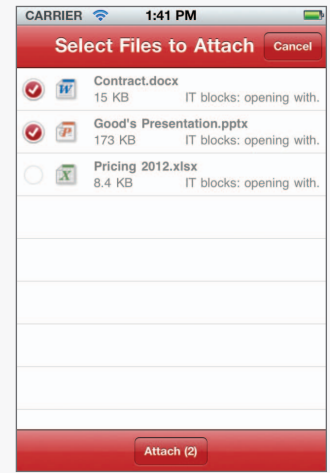

A password dedicated to the Good for Enterprise app ensures a secure connection.

Connect with your corporate email, just as you would at the office. Push notifications keep you updated on all activity in your account.

Securely browse critical corporate resources, such as Intranets, IT management portals, and executive dashboards within the Good for Enterprise app.

Attach multiple files to the same email, when you compose, reply or forward an email.

FEATURES	BENEFITS
A single, integrated, easy-to-use application	Quickly toggle from email to calendar to contacts—intuitively and seamlessly
Secure browser	Safely access company Intranets, wikis, and Web-based applications
File Repository	Unique secure partition and file system store and manage e-mail attachments and other files.
End-to-end encryption	Ensure enterprise-class data protection
Enterprise Application Distribution	Easily distribute approved custom or 3 <sup>rd</sup> party applications outside the Good container
Web-based over-the-air management console	Easily and securely deploy and manage business data on employee mobile devices from any Web browser
Remote wipe	Quickly and effectively delete the Good application and encrypted data if device is lost or stolen—or wipe the entire device in situations that require it
Policy-based management	Create custom policies for different employee groups and assign to one or multiple users at once
Policy-based administration	Assign rights and permissions for different roles (managers, staff, administrators) so employees can perform job-related tasks
